PROFESSIONAL SUMMARY

I'm a UI/UX designer who bridges business goals and user needs through thoughtful, intuitive design. I work across SaaS, healthcare, and fintech, turning complex workflows into simple, user-friendly experiences. My process combines user research, wireframing, prototyping, design systems, and developer handoff. I focus on solving real problems, reducing friction, and building interfaces that earn trust while supporting business growth.

EXPERIENCE

Senior Executive, UI/UX Designer Jul 2026 – Present

Softvence Delta, Dhaka, Bangladesh

- Lead a team of UI designers, setting design direction and reviewing every screen for clear hierarchy, consistent spacing and typography, strong contrast and tidy grid alignment.
- Lead design delivery across product, development and QA teams in Agile sprints, aligning scope, timelines and priorities to delivered on schedule.
- Established a design QA checklist covering hierarchy, consistency, accessibility and responsive behaviour, cutting revision cycles by 30%.
- Ground design decisions in competitor analysis, secondary research and usability findings, and present them to stakeholders in plain business terms to secure alignment before development.
- Define design standards and reusable component guidelines (spacing, type, colour, interaction states) that speed up new screens and keep the UI consistent across teams.

Jr. UI/UX Designer Feb 2025 – Jun 2026

Softvence Delta, Dhaka, Bangladesh

- Designed 50+ end to end interfaces for SaaS, healthcare and fintech business owners in a cross functional team.
- Built wireframes, interactive prototypes and high fidelity UI in Figma; task completion rose 20% in usability tests.
- Refined user flows and visual consistency through usability testing and stakeholder feedback, reducing drop off by 15%.
- Produced high quality handoff specs, cutting implementation errors and design dev back and forth by 25%.

EDUCATION

Diploma in Computer Science Technology Oct 2021 – Jan 2025

Narsingdi Polytechnic Institute, Narsingdi, Bangladesh

PROJECTS

Car Wash Service Booking Platform

- The business owner wanted a website that turns visitors into booked washes. My goal was to make choosing and booking effortless and give the business a base it can grow on.
- Users could not easily compare packages or see the price before committing. I used progressive disclosure (essentials first, details on demand), answered doubts early, and split booking into four short steps to lower the effort at each stage.
- The business owner received a clear booking journey, from choosing a package to confirmation, that they could review before development started.

Short Drama Streaming App

- The business owner wanted a streaming app for guests, individual viewers and professional creators, who each need something different. My goal was to give every role a clear path to what matters to them.
- Separate journeys for each role, profile completion progress to guide onboarding, plus live streams, clubs, wallet and subscriptions, and a creator dashboard with monetization.
- The business owner received a complete journey for every role, from first launch to creator monetization, a clear blueprint for their developers.

Mutual Interest Casting Platform for Dancers & Companies

- The business owner wanted a private place where dancers and companies connect only when both sides are interested, with no cold messages. My goal was to make this simple and guide each side to the right sign up.
- The "Green Light" idea, a private signal that says "I'm interested", was new to users and easy to misunderstand. I explained it in plain steps (one side sends a Green Light, a chat opens only when the other side does too), gave dancers and companies separate join paths, and showed pricing by role so each sees only what applies.
- The business owner received a clear journey for both user types, from first visit to sign in, with the Green Light idea explained the same way everywhere.

SKILLS

- **Design:** Advanced Figma (auto layout, variants, design tokens, prototyping, plugins), typography, colour, iconography, data visualization.
- **UX and Research:** Competitor analysis, secondary research, wireframing, usability testing, user flows, journey mapping, Agile/Scrum, Developer Handoff.
- **Conversion and Accessibility:** Conversion focused design, human centered thinking, WCAG 2.2 (contrast, scalable text, keyboard friendly).
- **AI Assisted Design:** Advanced prompting with v0.dev, Lovable and Figma Make.
- **Frontend:** Tailwind CSS, React (basic), Next.js (basic)

CERTIFICATIONS & TRAINING

- Fundamentals of UI/UX Design by Google
- Introduction to UI Design by Microsoft
- Industrial Attachment, Creative IT Institute
- Claude AI Fundamentals
